Management and monitoring of the registration process at LIFL

Xanadu

Management and monitoring of the registration process at LIFL

- A set of REST services between the Computer Science Laboratory of Lille (LIFL) and the Lille 1 university,

- Data can be exchanged in plain text, XML or JSON.

- A web service records the requests and the actions of the applications in charge of inscription,

- A web application tracks the events, analyzes the problems and offers a solution.

Xanadu

Management and monitoring of the registration process at LIFL

Technology used :

- Pharo 1.4
