What we have: Graphviz is a visualization engine

```
digraph classGraph {
    A [ shape=polygon, width = 6 ... ]
    B [ shape=polygon, width = 5 ... ]
    ...
    A -> B
    C -> D
    ...
}
```

What we would like

Scripting

Instance based

Any data model

Close to data

Interaction

Mondrian

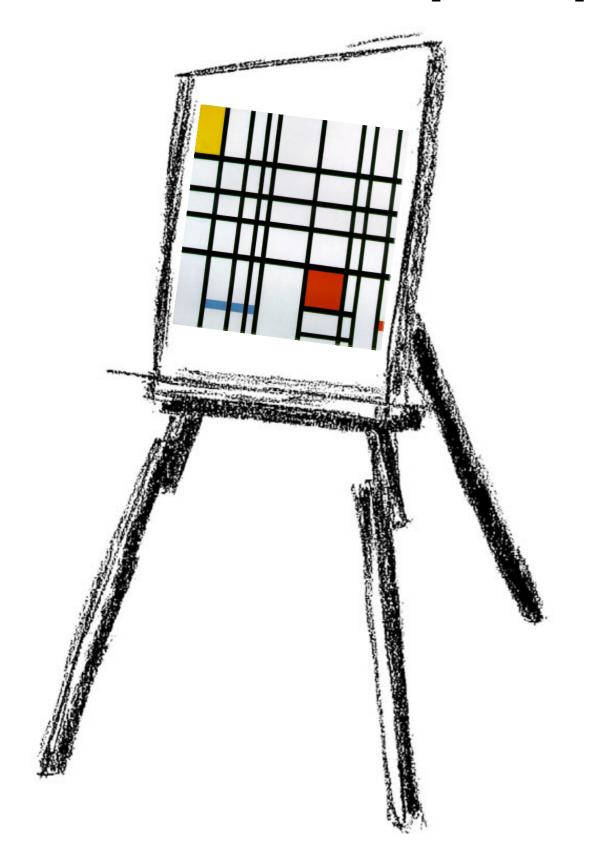

Mondrian metaphor: painting a view

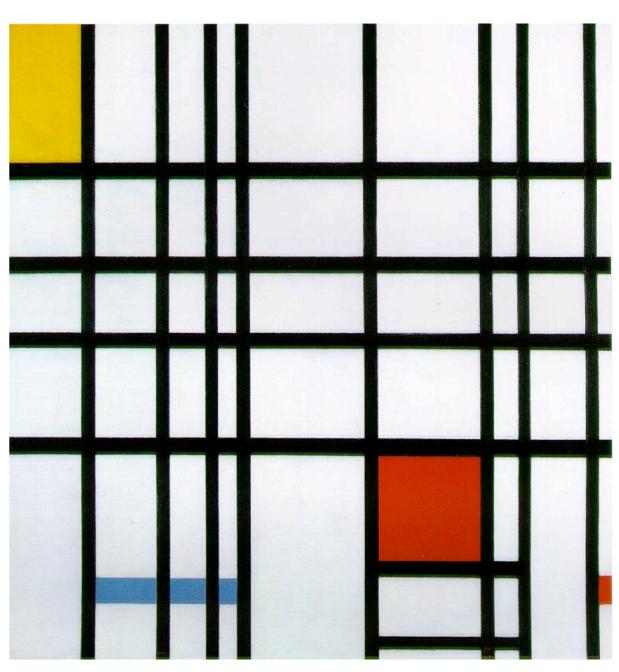

Mondrian metaphor: painting a view

Mondrian metaphor: painting a view

Composition with Red, Yellow and Blue Piet Mondrian (1921)

The simplest Mondrian script is an empty view

view := ViewRenderer new.

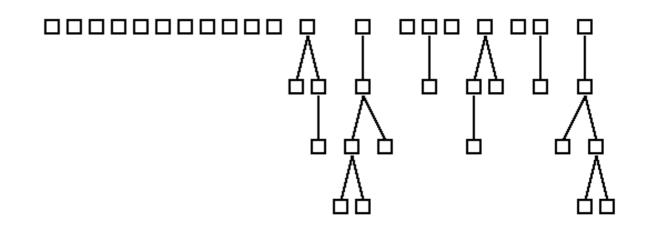

The view consists of nodes and edges arranged according to a layout

view := ViewRenderer new.

view **nodes:** classes.

view edges: classes from: [:each | each superclass] to: [:each | each].

view treeLayout.

Visual representation is given by the shape

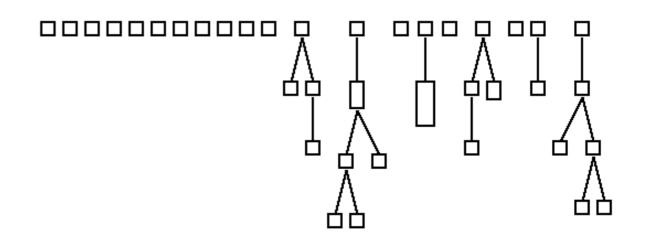

view := ViewRenderer new.

view **borderedRectangleShape height:** [:each | each numberOfMethods].

view nodes: classes.

view edges: classes from: [:each | each superclass] to: [:each | each].

view treeLayout.

Blocks can be replaced by symbols

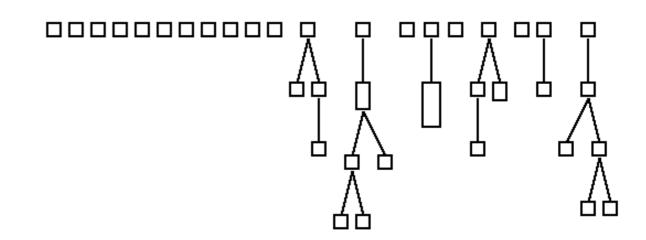

view := ViewRenderer new.

view borderedRectangleShape height: #numberOfMethods.

view nodes: classes.

view edgesFrom: #superclass.

view treeLayout.

Nesting is done through blocks

```
view := ViewRenderer new.
view borderedRectangleShape.
view nodes: classes forEach: [:each |
  view nodes: each methods.
  view gridLayout].
view edgesFrom: #superclass.
view treeLayout.
view open.
```

What about interaction?

Interaction is scriptable, too

```
view := ViewRenderer new.
view2 := ViewRenderer new.
view interaction onSelect: [:each | each viewOn: view2].
view interaction popupView: [:each :aView | each viewOn: aView].
view nodes: ...
view open.
view2 open.
```
