Yet another web
framework?

The problem

- Amber + REST?
- Seaside?

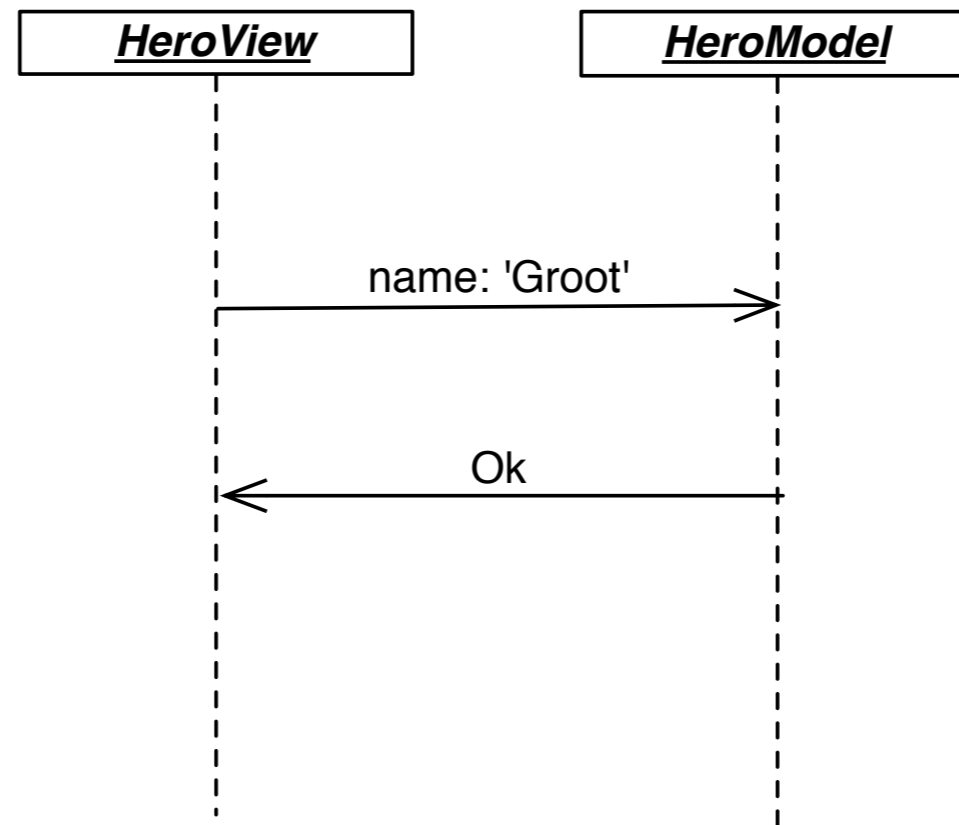

Amber + REST

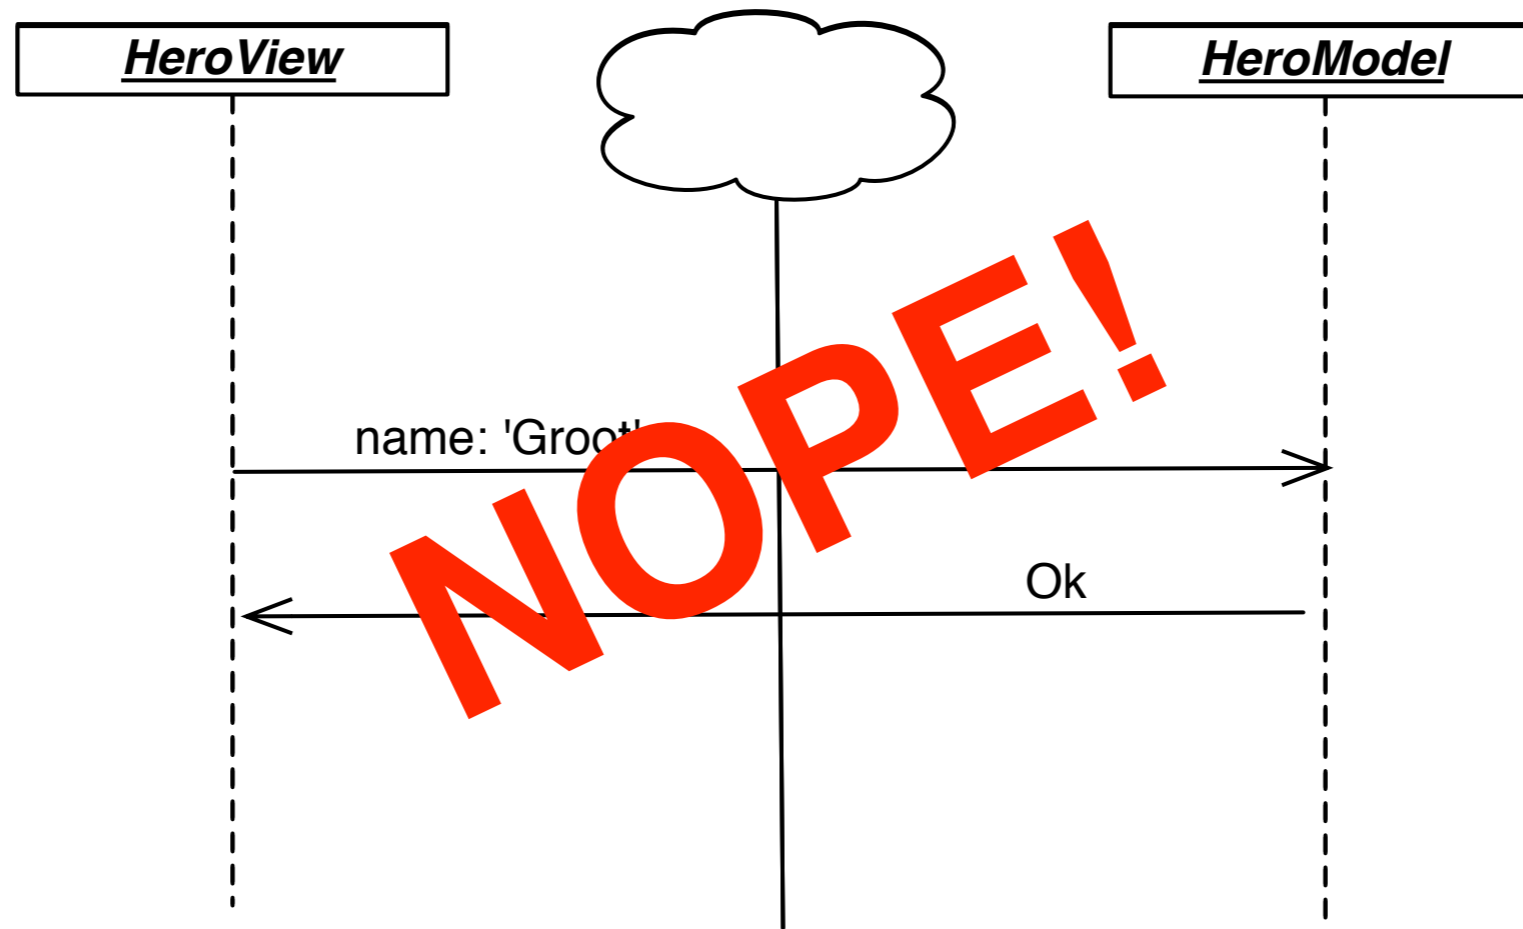

- Request nightmare
- Leads to bad design (if not super-careful)

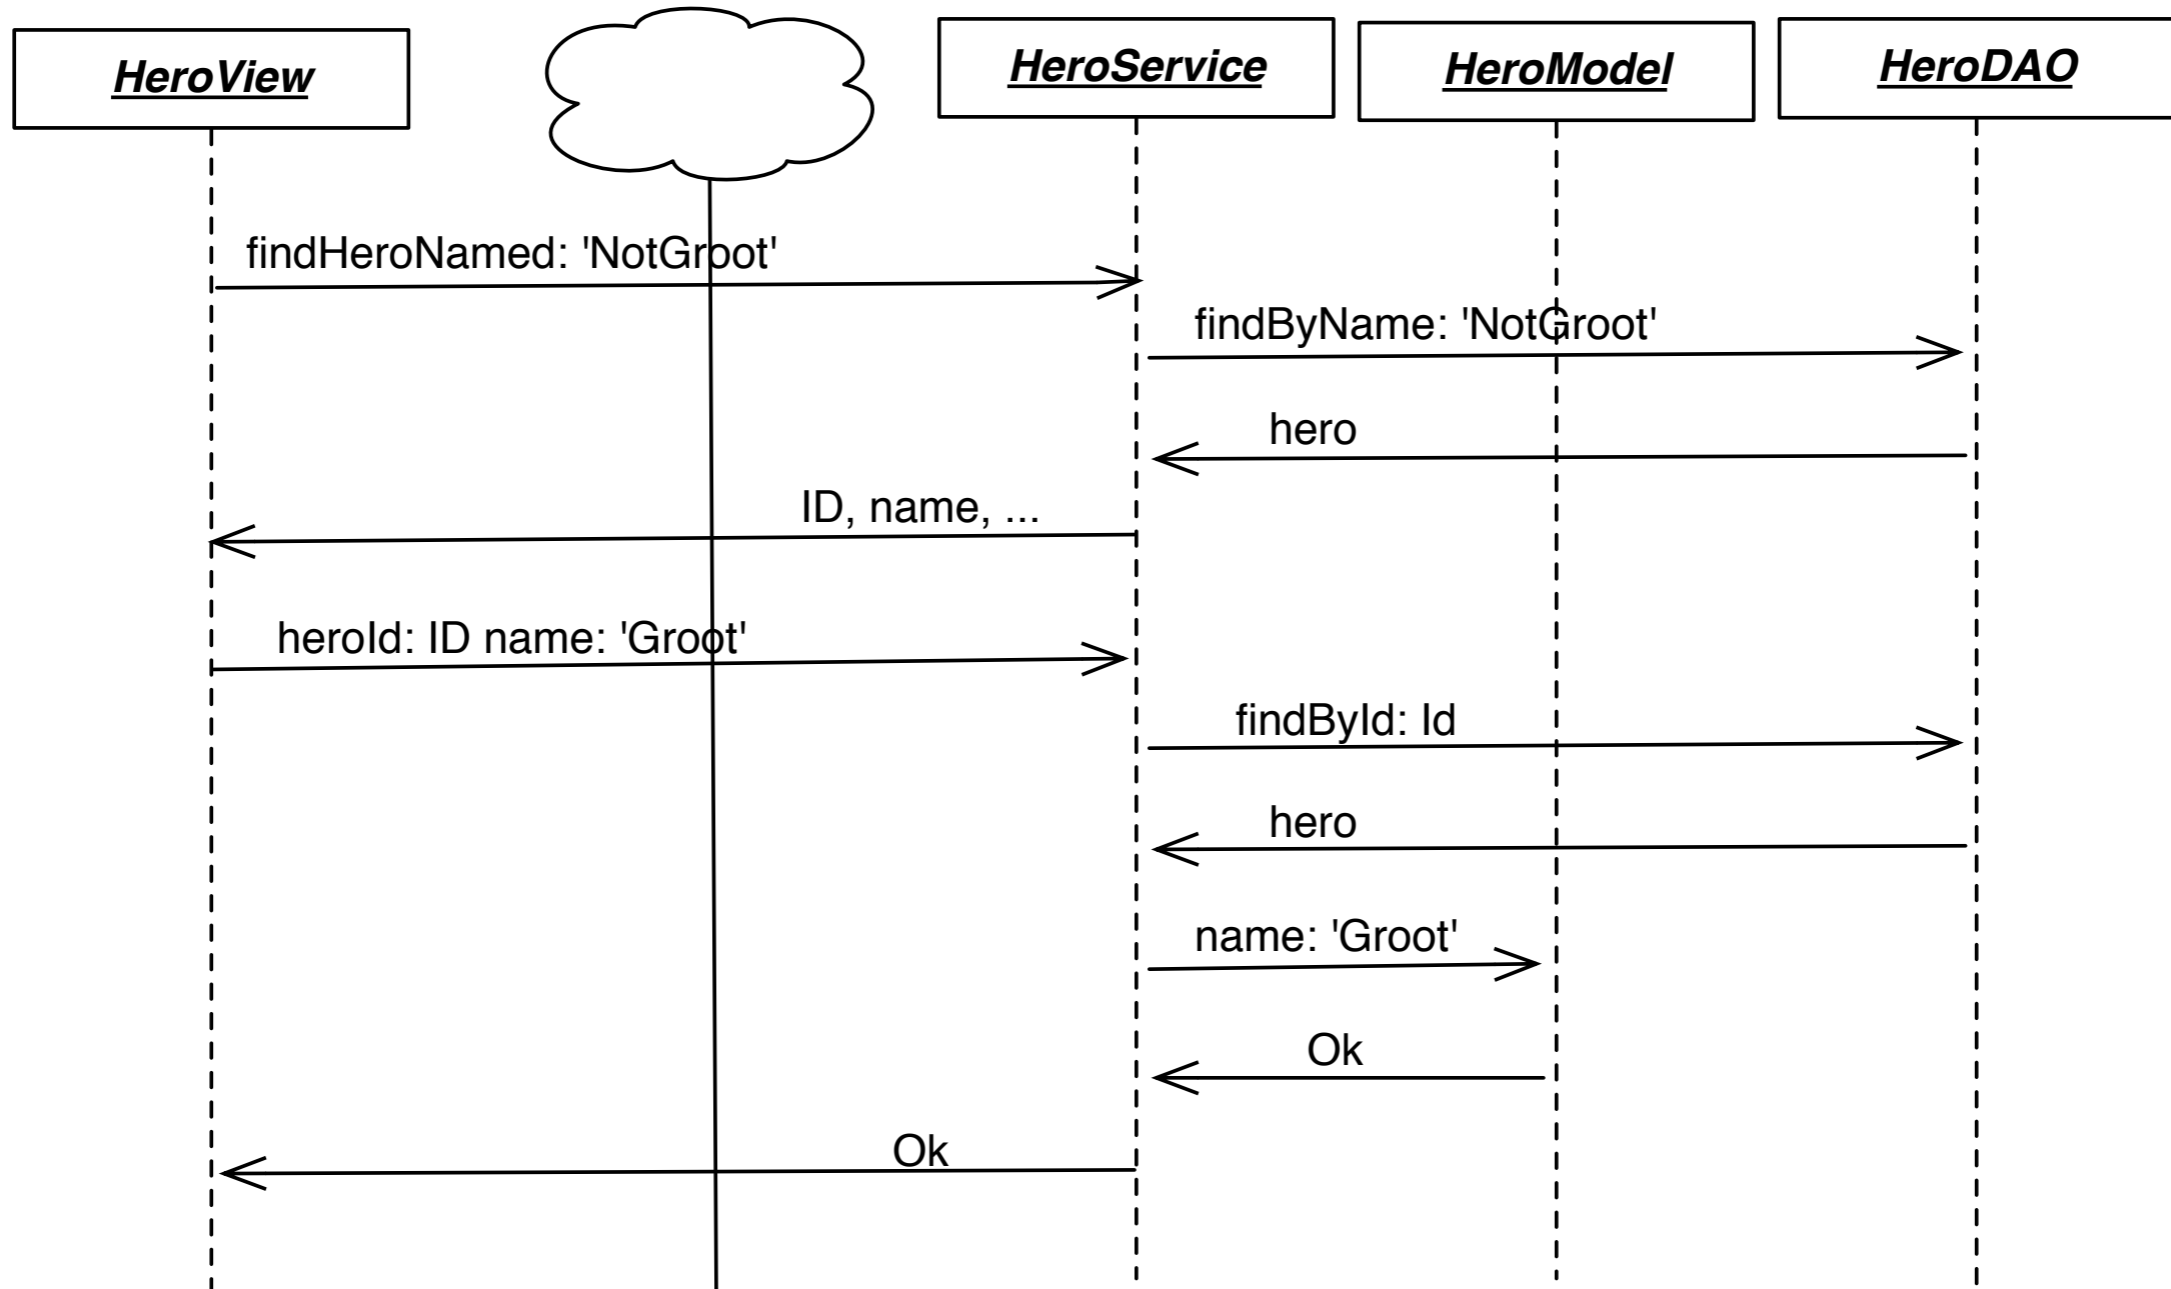

A small example

A small example

A small example

Seaside

- It is great!
 - but aging...
 - and not very well prepared for “Web 2.0”

We can do better

The problem

- How to do MVC?
- How to expose domain without adding unnecessary layers?
- How to keep the “seaside feeling” in a fat client-server application?

How?

- Amber + Pharo
- Through a communication bridge serialising JSON

Client side

- Proxies
- Futures (kinda)
 - Keeps the flow sequential
 - It is still not synchronic, but works most of the time

Server side

- Exposing objects
 - <action>
 - <state>
- Literals, Collections, Models

Demo

Counter class

```
HeroLair>>#heroes  
  ^ heroes
```

```
HeroLair>>#newHero  
  ^ Hero new
```

```
HeroLair>>#addHero:aHero  
  heroes add: aHero
```

Counter presenter

HeroLair>>#heroes

<state>

^ heroes

HeroLair>>#newHero

<action>

^ Hero new

HeroLair>>#addHero:aHero

<action>

heroes add: aHero

Counter client

```
lair := TDProxyClient on: '/lair'.  
lair connect.
```

```
lair heroes. “[]”
```

```
lair newHero
```

```
  then: [ :hero | lair addHero: (hero name: 'Groot') ];
```

```
  then: [ lair heroes collect: #name ]. “[ 'Groot' ]”
```

Marina

CMS for the simple minds

Yet another CMS?

The problem

- Pier is HUGE
- ... and hard to learn

How?

- Uses only already existing projects (we do not reinvent the wheel...)
 - On top of Tide (duh!)
 - User management: Mozilla persona
 - Syntax: Pillar (same as Pier)
 - Persistency: Voyage

Features

- Suitable for small/simple pages
- Very simple
- Stable
- Fast
- Can accept plugins
 - For now, just a basic blog (Disqus for comments)

Demo

!About Pharo

```
{{<div class="col-md-9 col-xs-12">}}
```

!!Mission

Pharo's goal is to deliver a clean, innovative, free open-source environment.

By providing a stable and small core system, excellent developing tools, and maintained releases, Pharo is an attractive platform to build and deploy mission critical applications.

Pharo fosters a healthy ecosystem of both private and commercial contributors who advance and maintain the core system and its external packages.

The immersive programming experience

Pharo gives you total control over your programming experience.

Focused on simplicity and immediate feedback, it is a pure object-oriented programming language *and* a powerful environment (think IDE and OS rolled into one).

It is open source and available for Mac, Windows and Linux.

Install Tide

Pre-requisites: node, npm, bower, pharo

```
$ git clone git@github.com:tide-framework/tide.git
$ cd tide && bower install && cd ..
$ pharo Pharo.image eval -save “
  Gofer it
  repository: ‘filetree://tide’;
  package: ‘BaselineOfTide’;
  load.
  BaselineOfTide load”
```

TDServer startOn: 7777.

... and open your browser  

Download it today!
